ALFA PELET

ALFA PELET 9

This economy giant from Vranje has shown, as many times before, that it recognizes strict demands of human environment protection in Serbia and the region, but at the same time, the demands of improvement of standard and the quality of life of the citizens of Serbia. In harmony with introducing latest technologies, achieved in the world and in the countries of the European Union, ALFA-PLAM enriched it's own production, and the Serbian market as well, with the product witch, without doubt, proves the determination of ALFA-PLAM to be the main character of domestic metallic industry in the future, and the confident and loyal friend of numerous households and business people in Serbia and the region.

ALFA PELET is the furnace of the latest generation, which uses pellet as fuel. What is pellet?

Pellet is fuel made of wood material, with no chemical additives, and causes absolutely no damage either to human health, or to human environment. As the result of the burning process, minimal quantity of ash is left, so the cleaning of the furnace can be done no more frequently than once a week. Pellet is rich in calories – up to 5,4 KWh/KG. Using pellet is simple and easy. It is being packed and sold in plastic sacks of 15 kilos, which is enough for heating spaces up to 55 m², up to 35 hours. The high level of automatic performance, makes ALFA PELET furnace, the nominal power of 8,5 KW, one of the most favorite members of the household – it gives a lot, and asks almost nothing in return. It is programmed to work repeatedly seven days in advance.

The ALFA-PLAM company, as the producer of ALFA PELET furnace, gives 2 years of guarantee. The producer also provides regular supply of pellet. The quality service support is a standard which is understood. When purchasing this product, the transport is provided, as well as final assembly, the starting of the working process and using instruction in the purchaser's premises!

Technical characteristics

The dimensions of the furnace (WxDxH)	500 x 470 x 940 mm
Nominal heating power	8,5 KW
Maximum pellet consumption	1,92 kg/h
Minimum working hours with full tank	11 h
Minimum fuel consumption	0,6 kg/h
Maximum working hours with full tank	35 h
The capacity of pellet tank	23 kg
Utilization degree	83 %
The diameter of the chimney connection	80 mm
Minimum chimney drought	2 Pa
Optimum chimney drought	12 Pa
Maximum electricity exit power	450 W
Heating volume	110-140 m ³
Heating surface	42-53 m ²
Weight	110 kg
